Computer's Comprehensive

CYBER SECURITY SOLUTIONS

Protecting Your Business in the Digital Age

BLUECHIP COMPUTER SYSTEMS LLC

www.bluechipgulf.com

INTRODUCTION:

- Bluechip Computers as a leading Systems Integrator for cyber security solutions in MENA region. Bluechip leverages partnership with best-of-the breed technology vendors, bundling solutions with in-house managed services to offer client a end to end solution. Headquarters in Dubai, UAE we have branches in Abu Dhabi, Sharjah, Saudi Arabia, 3 branches in India, Philippines and representative office in US. Our customers range from various sectors including Government, Banking & Finance, Retail, Oil & Gas, Telecom, Defense, Manufacturing, Hospitality, Medical and Education rely on Bluechip cyber solutions for managing and securing their IT infrastructure.

- Highlight the importance of cyber security for businesses in the current digital landscape.

Core Services

24/7
SERVICE

Bluechip's managed detection and response solution, with a focus on comprehensive protection, customized solutions, and 24/7 support.

MDM, UEM, VDI, DLP, Vulnerability Assessment, Penetration Testing, Inside Treat Prevention, User behavior monitoring, Enterprise storage and backup systems, Endpoint security and antivirus, MFA, DDoS Proteciton, DMARC, Brand Protection, PAM, EDR, XDR, MDR, NOC and SOC Solutions.

Key Cyber Security Solutions

Vulnerability Assessment involves using specific tools to identify, categorize, and evaluate vulnerabilities within a system.

On the other hand Penetration Testing actively exploits vulnerabilities to assess their severity, authenticity, potential for harm, and other related information.

Improved security posture, Compliance with standards, Risk mitigation

Cloud Security (also known as cloud computing security) encompasses a set of security measures designed to protect cloud-based infrastructure, applications, and data. These measures ensure user and device authentication, data and resource access control, and data privacy protection.

Enhanced cloud protection, Compliance, Data security

Secure Email Solutions

Email security solutions protect communications through advanced encryption protocols. All emails are digitally signed and encrypted to verify the sender's identity and ensure that the content remains unaltered. These solutions offer robust protection against unauthorized access and data breaches.

Enhanced email security, Verification of sender’s identity, Content integrity

Encryption

Protects the content of email messages, ensuring that sensitive information stays confidential and can only be accessed by the intended recipients.

Digital Signatures

Confirm the sender's identity and ensure the email hasn't been tampered with.

These measures help prevent data breaches, protect sensitive communications, and build trust in your email interactions.

Advanced Protection Services

Web Application Firewall (WAF)

A Web Application Firewall (WAF) is designed to protect web applications from a range of application layer attacks such as cross-site scripting (XSS), SQL injection, and cookie poisoning. It filters and monitors HTTP traffic between a web application and the Internet, offering robust protection against various threats.

Data Loss Prevention (DLP)

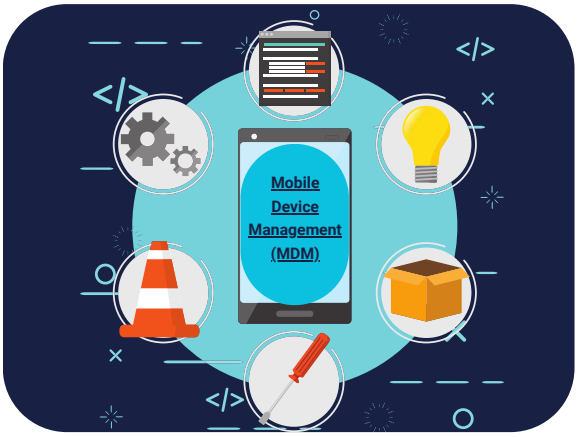
Data Loss Prevention (DLP) is a cybersecurity solution that helps detect and prevent data breaches by blocking the extraction of sensitive information. It ensures the secure handling of data and supports regulatory compliance by preventing unauthorized data access and leaks

Employee Monitoring Solutions

Employee Monitoring Solutions are software tools and systems designed to track, record, and analyze the activities of employees in a workplace. These solutions help companies monitor how employees use their time and resources, with the goal of improving productivity, ensuring compliance, and safeguarding data security.

Mobile Device Management (MDM)

Mobile Device Management (MDM) involves a set of tools and methodologies for managing mobile devices within a corporate environment. It provides a secure way to deploy mobile productivity tools and applications while ensuring that corporate data remains protected. MDM solutions support compliance and security across various device operating systems.



Specialized Cyber Security Solutions

PAM/PIM Solutions:

Privileged Access Management (PAM) and Privileged Identity Management (PIM) are critical components of Identity and Access Management (IAM). They focus on controlling access to a company's most sensitive resources, such as servers, databases, applications, and Kubernetes clusters.

These solutions help prevent insider threats, secure privileged credentials, and enhance overall access controls.

SASE Solutions

Secure Access Service Edge (SASE) integrates networking and security into a unified solution. This approach improves network performance and productivity, streamlines management and operations, and enforces consistent security policies.

Key benefits include simplified security management, optimized network performance, and secure remote access.

SIEM Solutions

Security Information and Event Management (SIEM) is a solution designed to help organizations detect, analyze, and address security threats before they impact business operations.

It features centralized security monitoring, rapid threat response, and improved compliance with regulatory requirements.

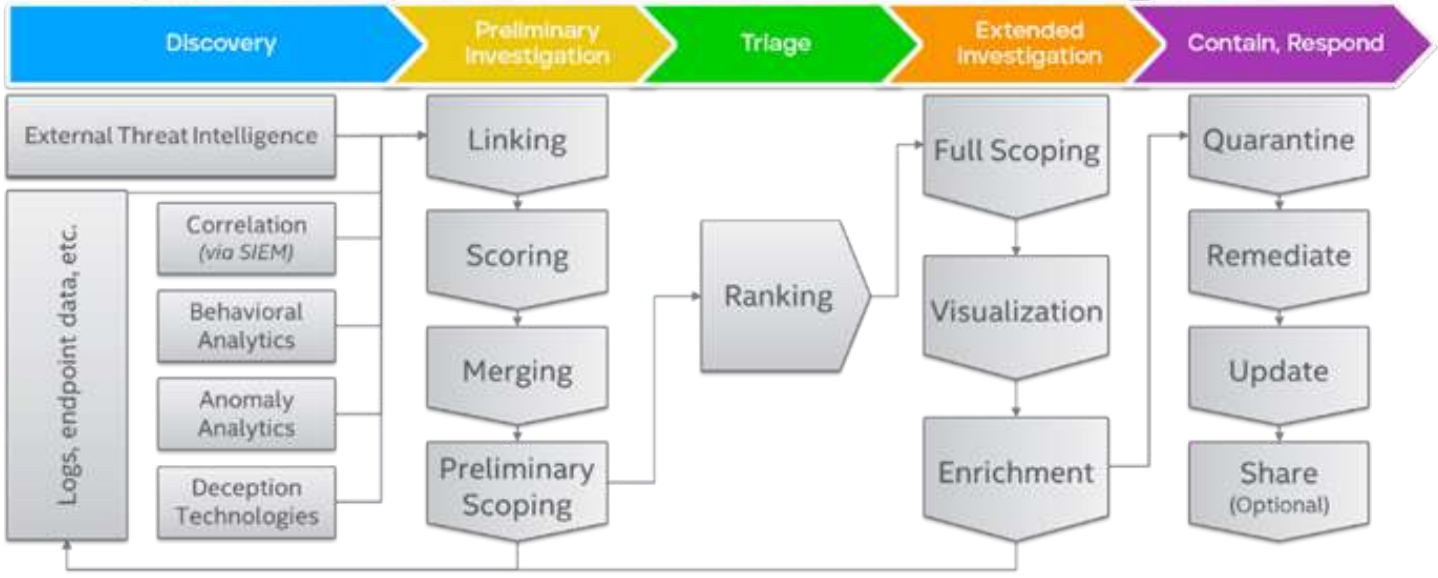
SOAR Solutions

Security Orchestration, Automation, and Response (SOAR) is designed to alleviate the burden on IT teams by automating responses to various security events. SOAR systems can be customized to fit organizational needs, offering benefits such as automated threat responses, enhanced incident management, and reduced response times.

Managed and Intelligent Threat Detection

SOC Center-Managed Threat Detection Services:

SOC Center ensures business security with continuous monitoring and expert threat analysis to keep your business secure . Benefit from 24/7 threat detection services that offer proactive threat mitigation to safeguard operations.



Benefits: NOC acts as the nervous system to manage and optimize business-critical tasks, like network troubleshooting, software distribution and updating, router and domain name management, performance monitoring and coordination with affiliated networks.

Anti-Spoofing and Impersonation Solutions

- Prevent email spoofing and impersonation attacks to safeguard corporate identity and protect against fraud. Solutions include:

Phishing Attack Prevention, Corporate Identity Protection, Fraud Prevention
